

VCH Imms BC – System Updates – October 24th, 2024

Enhancements below will impact VCH in-clinic users responsible for vaccine administration and data remediation, reporting and inventory management.

Changes anticipated for Imms BC include:

1. **Client Alert Update Functionality**
2. **Display Missing Consent Error Message when outside of Consent Effective Period**
3. **RPT – Update filters on 3 reports**
4. **Incorrect Consent Comment Recorded Date**

*Client Alert Update Functionality

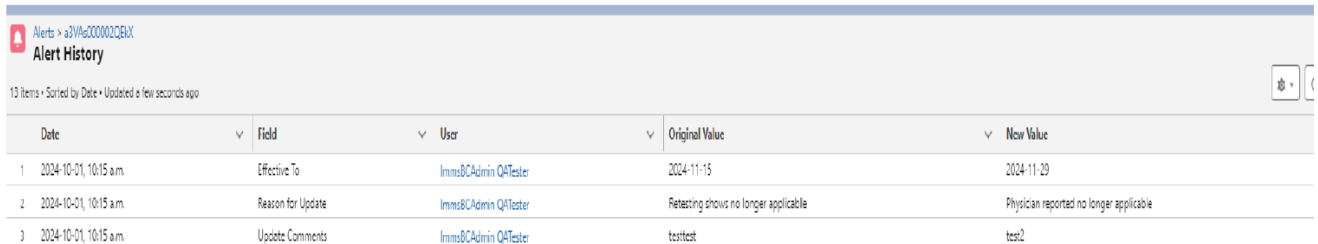

What's New?

Previously, there was no tracking of the field history on an alert object, and it was difficult to determine if an update was made on the update comments field within Imms BC for alerts. It is important that all clinical data has tracking and audit history. This change will allow users to see audit history on the UI when an Alert is updated.

* Display Missing Consent Error Message when outside of Consent Effective Period

What's New?

An issue had been found where the error message was not displaying appropriately when no valid consent record was on file in cases of back entry. This change will now ensure that the appropriate error message displays as intended in the Vaccine Administration and CIR workflows whenever there is not the

response of "Grant" effective on the Date of Administration. The 'Date Administered' and Effective From Date' should display with the same date.

- When viewing the Report 'Sched – Used Booking Capacity' - the 'Detail Rows' option is toggled off.

* Incorrect Consent Comment Recorded Date

What's New?

This bug fix will ensure that the Consent comment created date is accurate in Imms BC, and the same date populates for 'comment recorded date' and 'created by'.
